Object Oriented Hello World

PDF generated at 12:07 on Thursday 24th August, 2023

```
1  // See https://aka.ms/new-console-template for more information
2  // Console.WriteLine("Hello, World!");
3
4  using System;
5
6  namespace HelloWorld
7  {
8      class MainClass
9      {
10         public static void Main(string[] args)
11         {
12             Message myMessage;
13             myMessage = new Message("Hello World - from Message Object");
14             myMessage.Print();
15
16             Message[] messages = new Message[5];
17             messages[0] = new Message("Welcome Back");
18             messages[1] = new Message("What a lovely name");
19             messages[2] = new Message("Great name");
20             messages[3] = new Message("Oh hi!");
21             messages[4] = new Message("That is a silly name");
22
23             Console.Write("Enter name:");
24             string name = Console.ReadLine();
25             name = name.ToLower();
26
27             if (name == "duc")
28             {
29                 messages[0].Print();
30             }
31             else if (name == "hung")
32             {
33                 messages[1].Print();
34             }
35             else if (name == "phuong")
36             {
37                 messages[2].Print();
38             }
39             else if (name == "bao")
40             {
41                 messages[3].Print();
42             }
43             else
44             {
45                 messages[4].Print();
46             }
47
48             Console.ReadLine();
49         }
50     }
51 }
```

```
1  using System;
2
3  namespace HelloWorld
4  {
5      public class Message
6      {
7          private string _text;
8
9          public Message( string text)
10         {
11             _text = text;
12         }
13
14         public void Print()
15         {
16             Console.WriteLine(_text);
17         }
18     }
19 }
20
```

The screenshot shows a Visual Studio IDE with a C# project named 'HelloWorld'. The 'Program.cs' file is open, displaying the following code:

```
1 // See https://aka.ms/new-console-template for more information
2 // Console.WriteLine("Hello, World!");
3
4 using System;
5
6 namespace HelloWorld
7 {
8     class MainClass
9     {
10         public static void Main(string[] args)
11         {
12             Message myMessage;
13             myMessage = new Message("Hello World - from Message Object");
14             myMessage.Print();
15
16             Message[] messages = new Message[5];
17             messages[0] = new Message("Welcome Back");
18             messages[1] = new Message("What a lovely name");
19             messages[2] = new Message("Great name");
20             messages[3] = new Message("Oh hi!");
21             messages[4] = new Message("That is a silly name");
22
23             Console.WriteLine("Enter name:");
24             string name = Console.ReadLine();
25             name = name.ToLower();
26
27             if (name == "duc")
28             {
29                 messages[0].Print();
30             }
31             else if (name == "hung")
32             {
33                 messages[1].Print();
34             }
35             else if (name == "phuong")
36             {
37                 messages[2].Print();
38             }
39         }
40     }
41 }
```

The output window at the bottom shows the following text:

```
Hello World - from Message Object
Enter name:hung
What a lovely name
```

The status bar at the bottom right indicates 'Ln 31, Col 37' and 'Spaces'.
